

Workshop: Conceptualization-Driven Cognitive Behavioural Therapy for Psychosis

This 5-Day experiential workshop focuses on developing clinical skills for working with clients experiencing distressing psychosis. This recovery-focused approach focuses on cognitive case conceptualization and treatment planning for a variety of experiences of psychosis including delusions, hallucinations, negative symptoms, and communication disturbances. Longitudinal case conceptualization is highlighted as well as methods of working with core beliefs underlying psychosis and trauma. This workshop emphasizes practical development of clinical skills through live clinical demonstrations, video demonstrations, case examples, role-plays, and discussions of common challenges treating psychosis.

Michael W. Best, Ph.D., C.Psych

Dr. Michael Best is an Assistant Professor in the Graduate Department of Psychological Clinical Science at the University of Toronto where he is Director of both the Therapeutic Interventions for Psychosis Lab and the Clinical Research and Evaluation Center. He completed his graduate training at Queen's University and his residency at the Aaron T. Beck Psychopathology Research Centre in Philadelphia, PA. Dr. Best conducts clinical trials of CBT for psychosis and has worked in a variety of settings including inpatient, outpatient, assertive community treatment, and early psychosis intervention. Dr. Best has trained graduate students, psychiatry residents, and conducted CBTp trainings across North America. He is a Diplomate of the Academy of Cognitive and Behavioural Therapies and a Fellow of the Canadian Association of Cognitive and Behavioural Therapies.
